Title of proposal	2022/9151 - Great Eastern Highway Upgrade Project SLK 564-678
Section 1	
Summary of your proposed action	
1.1 Project industry type	Transport - Land
1.2 Provide a detailed description of the proposed action, incl	uding all proposed activities
Highway (GEH) between Straight Line Kilometre (SLK) 56.4	n Roads) is proposing to upgrade a section of Great Eastern and 67.8 (the Proposed action). The Proposed action is located west of Northam. The Proposed action spans 27.53 ha across
	verely affecting the safety and efficiency of the highway. This route ern Australia (WA) for two consecutive RAC surveys, owing to the road formation and seal widths, and the narrow or absent
The Key components of the Proposed action include: • Clearing of up to 16 ha of native vegetation for the reconstruction and widening to a 12 m formation; • Intersection improvements at Bodeguero Way, Wariin Roand Oyston Road; • Construction of additional passing lanes; and • Upgrade to drainage, kerbing, culverts and installation of	oad, Chedaring Road, Hawke Avenue, Inkpen Road, Coates Road
1.3 What is the extent and location of your proposed action? See Appendix B	
1.5 Provide a brief physical description of the property on whiproposed action (e.g. proximity to major towns, or for off-shore

Matters of national environmental significance			
2.1 Is the proposed action likely to have any direct or indirect impact on the values of any World Heritage properties?			
☐ Yes ☑ No			
2.2 Is the proposed action likely to have any direct or indirect impact on the values of any National Heritage places?			
☐ Yes ☑ No			
2.3 Is the proposed action likely to have any direct or indirect impact on the ecological character of a Ramsar wetland?			
☐ Yes ☑ No			
2.4 Is the proposed action likely to have any direct or indirect impact on the members of any listed species or any threatened ecological community, or their habitat?			
✓ Yes No			
Species or threatened ecological community			
Carnaby's Cockatoo (Calyptorhynchus latirostris)			
Impact			

The Proposed action area is within the known distribution and breeding range of the Carnaby's Cockatoo. The potential impacts the Proposed action may have on Carnaby's Cockatoo include:

- Removal of up to 16 ha of foraging habitat for the Carnaby's Cockatoo, comprising:
- Eucalyptus wandoo Woodland over Banksia
- Corymbia calophylla and Eucalyptus marginata Woodland
- Grassland with isolated trees (mix of jarrah, marri, and wandoo), and
- Melaleuca Shrubland
- The Proposed action will require the removal of up to 244 suitable Diameter at Breast Height (DBH) trees. Of these, 19 were recorded by Biologic (2021) (Attch 2-Biologic-Flora-Fauna Report_v1-Part 2, Table 4.16, Page 161) as containing hollows. A follow-up hollow suitability assessment by Tony Kirkby (Attch 3-BC Habitat Assessment-T Kirkby 2021) that determined that 18 of the recorded hollows were unsuitable for nesting by Black Cockatoos. The remaining hollow was assessed as suitable, and considered a likely breeding hollow due to the presence of chew marks. However, no evidence of current breeding by Black Cockatoos was observed at the hollow during any of the fauna assessments and, noting that the chew marks could be attributable to other species, including galahs.
- Breeding is known to occur within 5 km of the Proposed action area. Vegetation to be removed may provide foraging support to breeding pairs within the local region.
- A night roost was recorded on Mairinger Way, approximately 500 m from the Proposed action area, which is utilised by up to 30 birds (mixture of Carnaby's and Baudin's) and a further three roost sites have been recorded within 6 km of the Proposed action area. Evidence of roosting is usually seen through chewed off branches and discarded feathers. Biologic (2021) (Attch 2-Biologic-Flora-Fauna Report_v1-Part 2, Page 153) did not record evidence of potential roosting within the Proposed action area. The clearing of up to 16 ha of suitable foraging habitat, while small in the regional context, may provide foraging support to local roosting sites.

The Proposed action will not result in the creation of a gap greater than 4 km between patches of habitat.

According to the referral guidelines for three threatened black cockatoo species (DSEWPaC 2012), the Proposed action is considered to have the potential to result in significant impacts on Carnaby's Cockatoos. However, it is noted that these referral guidelines take a precautionary approach and that many projects that involve these actions, are subsequently

determined as not having significant impacts. The Commonwealth Significant Impact Guidelines 1.1 adopts criteria for the assessment of impact to threatened species relating to 'populations' and/or 'important populations' (DotE, 2013). However, these terms have not been defined for Black Cockatoos, due to the mobile and widely distributed nature of these species, and the variation in flock compositions (e.g. between breeding and non-breeding seasons). For Black Cockatoos, it is more appropriate to consider the significance in terms of impacts on habitat rather than a resident population (DSEWPaC, 2012; DoEE, 2017). Considering this, the following additional information is provided:

- The removal of 16 ha of foraging habitat represents a small area (0.2%) of the available potential foraging habitat within 6 km of the Proposed action. Regional mapping of remnant native vegetation associations known to be utilised by Carnaby's Cockatoo indicates a total area of 6,905 ha of potential foraging habitat occurs within 6 km of the Proposed action area, with 2,385 ha (34%) of this located within DBCA managed lands as conservation estate (see Figure 1).
- Two conservation reserves, managed by the DBCA, occur immediately adjacent to the Proposed action area. It is considered likely that these reserves contain habitat that is of similar or better quality than that within the Proposed action area. Furthermore, it is considered likely that these reserves contain a significant number of suitable DBH trees that may provide hollows suitable to support breeding.

Detailed assessment of the potential impacts to Carnaby's Cockatoo is provided in Table 1 of Attch 1-Coates Gully-MNES Assessment Memorandum.

Species or threatened ecological community

Baudin's Cockatoo (Calyptorhynchus baudinii)

Impact

The Proposed action area occurs near the northern most extent of the Baudin's Cockatoo modelled distribution. The potential impacts the Proposed action may have on Baudin's Cockatoo include:

- Removal of up to 15.8 ha of foraging habitat for the Baudin's Cockatoo, comprising:
- Eucalyptus wandoo Woodland over Banksia
- Corymbia calophylla and Eucalyptus marginata Woodland, and
- Grassland with isolated trees (mix of jarrah, marri, and wandoo)
- A night roost was recorded on Mairinger Way, approximately 500 m from the Proposed action area (Biologic, 2021), which is utilised by up to 30 birds (mixture of Carnaby's and Baudin's) and a further three roost sites have been recorded within 6 km of the Proposed action area. Evidence of roosting is usually seen through chewed off branches and discarded feathers. Biologic (2021) (Attch 2-Biologic-Flora-Fauna Report_v1-Part 2, Page 153) did not record evidence of potential roosting within the Proposed action area. The clearing of up to 15.8 ha of suitable foraging habitat, while small in the regional context, may provide foraging support to local roosting sites.

The Proposed action area is not considered to support breeding by Baudin's Cockatoo. The nearest known breeding area is approximately 50 km south within the Wungong Catchment Area (T. Kirkby 2021, pers. comm. 4 November). The Proposed action will not result in the creation of a gap greater than 4 km between patches of habitat. According to the referral guidelines for three threatened black cockatoo species (DSEWPaC 2012), the Proposed action is unlikely to result in significant impacts on Baudin's Cockatoos. However, it is noted that these referral guidelines take a precautionary approach and that many projects that involve these actions, are subsequently determined as not having significant impacts.

The Commonwealth Significant Impact Guidelines 1.1 adopts criteria for the assessment of impact to threatened species relating to 'populations' and/or 'important populations' (DotE, 2013). However, these terms have not been defined for Black Cockatoos, due to the mobile and widely distributed nature of these species, and the variation in flock compositions (e.g. between breeding and non-breeding seasons). For Black Cockatoos, it is more appropriate to consider the significance in terms of impacts on habitat rather than a resident population (DSWEPaC, 2012; DoEE, 2017). Considering this, the following additional information is provided:

• The removal of 15.8 ha of foraging habitat represents a small area (0.2%) of the available potential foraging habitat within 6 km of the Proposed action. Regional mapping of remnant native vegetation associations known to be utilised by Baudin's Cockatoo indicates a total area of 6,905 ha of potential foraging habitat occurs within 6 km of the Propose action area, with 2,385 ha (34%) of this located within DBCA managed lands as conservation estate (see Figure 1).

Detailed assessment of the potential impacts to Baundin's Cockatoo is provided in Table 1 Attch 1-Coates Gully-MNES Assessment Memorandum.

Species or threatened ecological community

Forest Red-tailed Black Cockatoo (Calyptorhynchus banksii naso)

Impact

The Propose action area is within the known distribution range of the Forest Red-tailed Black Cockatoos. The Proposed action has the potential to impact Forest Red-tailed Black Cockatoos by the following:

- Removal of up to 15.8 ha of foraging habitat for the Forest Red-tailed Black Cockatoo, comprising:
 - Eucalyptus wandoo Woodland over Banksia
- Corymbia calophylla and Eucalyptus marginata Woodland, and
- Grassland with isolated trees (mix of jarrah, marri, and wandoo) Foraging and Breeding habitat.
- The Propose action will require the removal of up to 244 suitable DBH trees. Of these, 19 were recorded by Biologic (2021) (Attch 2-Biologic-Flora-Fauna Report_v1-Part 2, Table 4.16, Page 161) as containing hollows. A follow-up hollow suitability assessment by Tony Kirkby (Attch 3-BC Habitat Assessment-T Kirkby 2021) that determined that 18 of the recorded hollows were unsuitable for nesting by Black Cockatoos. The remaining hollow was assessed as suitable, and considered a likely breeding hollow due to the presence of chew marks. However, no evidence of current breeding by Black Cockatoos was observed at the hollow during any of the fauna assessments and, noting that the chew marks could be attributable to other species, including galahs.

The Propose action will not result in the creation of a gap greater than 4 km between patches of habitat or impact on a known night roosting site.

Based on the above, the Propose action is considered to have the potential to result in significant impacts on Black Cockatoos. However, it is noted that these referral guidelines take a precautionary approach and that many projects that involve these actions, are subsequently determined as not having significant impacts. The Commonwealth Significant Impact Guidelines 1.1 adopts criteria for the assessment of impact to threatened species relating to 'populations' and/or 'important populations' (DotE, 2013). However, these terms have not been defined for Black Cockatoos, due to the mobile and widely distributed nature of these species, and the variation in flock compositions (e.g. between breeding and non-breeding seasons). For Black Cockatoos, it is more appropriate to consider the significance in terms of impacts on habitat rather than a resident population (DSWEPaC, 2012; DoEE, 2017). Considering this, the following additional information is provided:

• The removal of 15.8 ha of foraging habitat represents a small area (0.2%) of the available potential foraging habitat within 6 km of the Propose action. Regional mapping of remnant native vegetation associations known to be utilised by Forest Redtailed Black Cockatoos indicates a total area of 6,905 ha of potential foraging habitat occurs within 6 km of the Propose action area, with 2,385 ha (34%) of this located within DBCA managed lands as conservation estate (see Figure 1).

Detailed assessment of the potential impacts to Forest Red-Tailed Black Cockatoo is provided in Table 2 of Attch 1-Coates Gully-MNES Assessment Memorandum.

Section 3

Description of the project area

3.1 Describe the flora and fauna relevant to the project area

Flora

A total of 47 conservation significant flora taxa were identified from the database searches as having the potential to occur within the Proposed action area. No flora species listed under the EPBC Act were identified by the desktop assessment as occurring within the Proposed action area.

Two biological surveys have been conducted over the Proposed action area. Together these surveys recorded a total of 223 discrete vascular flora taxa from 55 families and 149 genera. No flora species listed under the EPBC Act were recorded. These surveys are presented in 2 Attch 2-Biologic-Flora-Fauna Report_v1-Part 1 and Part 2, and Attch 4-360 Environmental Final Report-Detailed Flora and Vegetation.

Biologic (2021) (Attch 2-Biologic-Flora-Fauna Report_v1-Part 1, Section 4.3.6, Pages 84 -87) recorded 49 non-native flora taxa occurring within and adjacent to the Proposed action area. None of the recorded introduced flora species are Declared Pests (WA) or Weeds of National Significance (Cth).

Fauna

Desktop assessments identified 33 significant vertebrate fauna species records in the vicinity of the Proposed action, comprising 14 mammals, 18 birds, and one reptile. Of these, 20 are listed as Critically Endangered, Endangered, Vulnerable, Conservation Dependent, or Specially Protected under the EPBC Act and/or BC Act, a further eight are listed as Migratory under the EPBC Act and/or BC Act.

The field survey recorded 51 vertebrate fauna species, comprising eight mammals, 39 birds, four reptiles, and four introduced mammal species (Attch 2-Biologic-Flora-Fauna Report_v1-Part 2, Section 4.4.2). Three significant fauna species were recorded within the Proposed action area, including:

- Carnaby's Cockatoo (Calyptorhynchus latirostris) Endangered (EPBC Act)
- Baudin's Cockatoo (Calyptorhynchus baudinii) Endangered (EPBC Act)
- Forest Red-tailed Black Cockatoo (Calyptorhynchus banksii naso) Vulnerable (EPBC Act)

Biologic (2021) identified and mapped a number of fauna habitats comprising; Eucalyptus wandoo Woodland over Banksia, Corymbia and Eucalyptus marginata Woodland, Grassland with Isolated Trees, Melaleuca Shrubland, Isolated Trees, and Sedgeland. Of these, the 'woodland' habitats are significant for Black Cockatoos, with wandoo, marri, and jarrah recognised nesting tree species for all three cockatoo species and also providing foraging value.

The Proposed action area coincides with 16 ha of suitable fauna habitat consisting of:

- 13 ha Eucalyptus wandoo Woodland over Banksia
- 1.2 ha Corymbia and Eucalyptus marginata Woodland
- 0.4 ha Melaleuca Shrubland
- 1.4 ha Isolated Trees

The Proposed action will require the removal of up to 244 suitable DBH trees. Of these,19 were recorded by Biologic (2021) (Attch 2-Biologic-Flora-Fauna Report_v1-Part 2, Table 4.16, Page 161) as containing hollows. A follow-up hollow suitability assessment by Tony Kirkby (Attch 3 - BC Habitat Assessment-T Kirkby 2021) was undertaken which determined that 18 of the recorded hollows were unsuitable for nesting by Black Cockatoos. The remaining hollow was assessed as suitable and considered a likely breeding hollow due to the presence of chew marks. However, no evidence of current breeding by Black Cockatoos was observed at the hollow during any of the fauna assessments and it is possible that the chew marks could be attributable to other species, including galahs.

3.2 Describe the hydrology relevant to the project area (including water flows)

Within the Northern Jarrah Forest, rivers are the only wetlands of subregional significance (Williams & Mitchell, 2001). The Proposed action area is located within the Wooroloo Brook sub-catchment within the Swan-River Lower Swan Catchment of the Swan Coastal Basin.

The Proposed action area periodically intersects Coates Gully, a minor water course that follows the GEH for the majority of the Proposed action area. Coates Gully is fed by numerous other water courses surrounding the Proposed action area, before flowing into an unnamed major perennial water course then into Wooroloo Brook, eventually discharging into the Swan River.

There are no Public Drinking Water Source Areas within the Proposed action area. The Proposed action area is located

within the Swan River Surface Water Area, as proclaimed under the Rights in Water and Irrigation Act 1914 (WA) (RIWI Act). There are no Ramsar, nationally significant or other mapped wetlands in the Proposed action area, and biological surveys over the Proposed action area did not record any wetlands.

The Proposed action area is not located in a proclaimed Groundwater Area under the RIWI Act.

3.3 Describe the soil and vegetation characteristics relevant to the project area

The Proposed action area intersects two mapped soil systems, consisting of:

- Boyagin System Large duricrust remnants surrounded by stripped terrain of rock outcrops and fresh soils in Eastern Darling Range Zone. Gravels have Jarrah-Marri-Parrotbush forest. Loams and duplexes with York and Wandoo. Mallet and Powderbark on scarp
- Murray Valleys System Western Darling Range from the Avon Valley to Harvey. Deeply incised valleys with Red loamy earths, shallow duplexes and rock outcrop and Jarrah-marri-wandoo forest and woodland with mixed shrubland

Broad scale pre-European vegetation mapping identifies two main vegetation associations coinciding with the Proposed action area:

- 1006.1: described as woodland southwest, jarrah (Eucalyptus marginata), marri (Corymbia calophylla) and wandoo (Eucalyptus wandoo)
 - 3003.1: described as forest, mainly jarrah (Eucalyptus marginata) and marri (Corymbia calophylla)

The Proposed action area intersects five vegetation complexes:

- Murray 2 (My2) open forest of Eucalyptus marginata subsp. thalassica, Corymbia calophylla, E. patens and woodland of E. wandoo with some E. accedens on valley slopes to woodland of E. rudis and Melaleuca rhaphiophylla on the valley floors in semiarid and arid zones
- Pindalup (Pn) open forest of E. marginata subsp. thalassica, C. calophylla on slopes and open woodland of E. wandoo with some E. patens on the lower slopes in semiarid and arid zones
- Yalanbee (Y5) Mixture of open forest of E. marginata subsp. thalassica, C. calophylla and woodland of E. wandoo on lateritic uplands in semiarid to perarid zones
- Yalanbee (Y6) Woodland of E. wandoo and E. accedens and less consistently open forest of E. marginata subsp. thalassica and C. calophylla on lateritic uplands and breakaway landscapes in arid and perarid zones
- Coolakin (Ck) Woodland of E. wandoo with mixtures of E. patens, E. marginata subsp. thalassica and C. calophylla on the valley slopes in arid and perarid zones

The Proposed action area contains approximately 16 ha of native vegetation. Biological surveys over the Proposed action area recorded 19 vegetation types, which are described in Attch 2-Biologic-Flora-Fauna Report_v1-Part 1, Table 4.10, Pages 89-96 and Attch 4-360 Environmental Final Report-Detailed Flora and Vegetation, Table 9, Pages 35-37.

3.4 Describe any outstanding natural features and/or any other important or unique values relevant to the project area

There are no outstanding natural features and/or any other important or unique values relevant to the project area

3.5 Describe the status of native vegetation relevant to the project area

The Proposed action area is located within the Jarrah Forest IBRA bioregion, where approximately 53% of pre-European vegetation remains within Western Australia. The Proposed action area coincides within vegetation associations 1006 and 3003, which retain approximately 48.4% and 58.7% of their pre-European extent at that IBRA region scale, respectively. Vegetation within the Proposed action area is not considered to be locally or regionally significant or constrained. The extent of the pre-European vegetation associations affected by the Proposed action have been determined by the state-wide vegetation remaining extent calculations maintained by the DBCA (latest update March 2019 – Gov. of Western Australia, 2019).

None of the vegetation types mapped in the Proposed action area represent a Threatened Ecological Community listed under the EPBC Act or BC Act, or are considered a DBCA Priority Ecological Community.

Thirty-one vegetation types were recorded and delineated within the wider survey area (Attch 2 -Biologic-Flora-Fauna Report_v1-Part 1, Section 4.3.7, Table 4.10, page 89-96; and attch3). Within the Proposed action area, 19 vegetation associations will be directly impacted, of which AhEw and EwBsq.

The Proposed action area comprises 16 ha of native vegetation which ranges in condition from 'Completely Degraded' to 'Excellent', with 75% of the Proposed action area ranging from 'Good' to 'Excellent'. Vegetation condition throughout the Proposed action area and wider survey has been mapped and described in Attch 2 -Biologic-Flora-Fauna Report_v1-Part 1, section 4.3.9, page 105 to 112.

3.6 Describe the gradient (or depth range if action is to be taken in a marine area) relevant to the project area

The gradient within the Proposed action area ranges from 230 mAHD to 240 mAHD. The Proposed action will result in minor changes to the local topography as improving the vertical geometry of the existing alignment is a key component of the Proposed action.

3.7 Describe the current condition of the environment relevant to the project area

The Proposed action area is predominantly cleared, with the existing alignment making up approximately 80% of the Proposed action area. As stated previously, the Proposed action area comprises 16 ha of native vegetation. Vegetation condition within the Proposed action area ranges from 'Completely Degraded' to 'Excellent' with the majority of vegetation in a 'Good' or better condition (12 ha or 75%), with the remaining area in 'Degraded' to 'Completely Degraded' condition.

3.8 Describe any Commonwealth Heritage places or other places recognised as having heritage values relevant to the project

There are no Commonwealth Heritage places or other places recognised as having heritage values relevant to the project area.

3.9 Describe any Indigenous heritage values relevant to the project area

A review of relevant Aboriginal heritage databases determined that the Proposed action will not impact any known registered or lodged Aboriginal heritage sites. The Proposed action area has been subject to a number of previous heritage surveys, none of which have identified any Aboriginal heritage sites within the Proposed action area. The most recent survey is provided as Attch 5-Heritage Survey-November 2011.

3.10 Describe the tenure of the action area (e.g. freehold, leasehold) relevant to the project area

The Proposed action is predominantly located within designated road reserves zoned Regional Roads under the Shire of Northam Town Planning Scheme (TPS). Additional land tenures are freehold land generally in private ownership and within Conservation estate managed by the DBCA. DBCA have provided authorisation to acquire the small segments of land required for the Proposed action and incorporate those sections into the road reserve.

Main Roads will undertake consultation with any affected land holders and will acquire all land required for the Proposed action prior to commencement of the action through negotiated settlement, or in accordance with powers under the Planning and Development Act 2005.

3.11 Describe any existing or any proposed uses relevant to the project area

The Proposed action area is predominantly located within the designated road reserves under the Shire of Northam Town Planning Scheme. The existing land use within the Proposed action area is predominately the existing road alignment, with small occurrences of conservation reserve that is vested with the DBCA, unallocated crown land and private property. Main Roads is in consultation with DBCA and private land owners regarding land access and, where required, acquisition. Proposed land use is a primary regional road in the form of the GEH.

The proposed action is consistent with the majority of the existing land use coinciding with the proposed action area.

Section 4

Measures to avoid or reduce impacts

4.1 Describe the measures you will undertake to avoid or reduce impact from your proposed action

There are several factors driving the proposed widening and resealing of this section of GEH, including the significant age and wear of the pavement, narrow or absent shoulders, and poor geometry. The current condition of GEH does not meet current road safety standards leading to poor safety outcomes for road users. The project has been developed to reduce the area of clearing as much as possible; however, some clearing will be necessary to achieve the safety objectives of the proposal. Temporary ancillary activities such as site offices, storage areas, laydown areas, and stockpiles will be restricted to previously cleared areas. Materials for the project will also be sourced from existing cleared areas such as farm paddocks to avoid additional clearing.

Additional measures to reduce clearing and ground disturbance for the Proposed action have included the installation of safety barriers, where appropriate, into the final design for construction. The barriers have allowed for sections of batter to be steepened thereby reducing the clearing footprint. The clearing area will be demarcated prior to clearing commencing to ensure clearing is contained within the approved boundary.

A project-specific Construction Environmental Management Plan (CEMP) will be prepared to minimise the environmental impacts associated with the Proposed action as well as identifying areas of responsibility required for the implementation of management strategies. The CEMP will be implemented prior to construction and remain in place during construction and post-construction works.

4.2 For matters protected by the EPBC Act that may be affected by the proposed action, describe the proposed environmental outcomes to be achieved

The proposed environmental outcomes for the matters potentially impacted by the project would be:

- No adverse material impact on listed threatened species
- No material decrease in habitat necessary for the maintenance of the species

Commonwealth Heritage places overseas

Commonwealth marine areas

	A water resource, in relation to coal seam gas development and large coal mining development			
	Protection of the environment from nuclear actions			
	Protection of the environment from Commonwealth actions			

5.2 If no significant matters are identified, provide the key reasons why you think the proposed action is not likely to have a significant impact on a matter protected under the EPBC Act and therefore not a controlled action

In summary, while it is accepted that the Proposed action may have a localised impact on resident individuals, the Proposed action is not considered to result in a significant impact on the three Black Cockatoo species as:

- The Proposed action will require the removal of up to 16 ha of potential foraging habitat, representing a small area (0.2%) of the available potential foraging habitat within 6 km of the proposed action. Regional mapping of remnant native vegetation associations known to be utilised by Carnaby's Cockatoo indicates a total area of 6,905 ha of potential foraging habitat occurs within 6 km of the Proposed action area, with 2,385 ha (34%) of this located within DBCA managed lands as conservation estate.
- Biologic (2021) assessed the habitat quality related to Carnaby's Cockatoo within the Proposed action area. Habitat was assessed to vary between 'Moderate' to 'High', with >70% of the Proposed action area comprising 'Moderate' quality habitat.
- The Proposed action will require the removal of up to 244 suitable DBH trees. Of these, 19 were recorded by Biologic (2021) (Attch 2-Biologic-Flora-Fauna Report_v1-Part 2, Table 4.16, Page 161) as containing hollows. A follow-up hollow suitability assessment by Tony Kirkby (Attch 3-BC Habitat Assessment-T Kirkby 2021) determined that 18 of the recorded hollows were unsuitable for nesting by Black Cockatoos. The remaining hollow was assessed as suitable and considered a likely breeding hollow due to the presence of chew marks. However, no evidence of current breeding by Black Cockatoos was observed at the hollow during any of the fauna assessments and, noting that the chew marks could be attributable to other species, including galahs.

Given the presence of over 6,000 ha of remnant vegetation within 6 km of the Proposed action area, of which 2,385 ha is within the DBCA conservation estate, it is considered unlikely that these impacts will result in a long-term decrease in the population. Additionally, a number of mitigation measures will be implemented through the preparation of a Construction Environmental Management Plan (CEMP) to further minimise the risk of impact to the species. These measures will include, but are not limited to:

- Prestart and toolbox meeting to raise awareness of environmental management requirements and operational controls,
- Definition of work area and exclusion zones using fencing, flagging or other appropriate signage,
- Injured, sick or orphaned native fauna located on the project site will be notified immediately to the Superintendent. Contact will be made to either the local DBCA office or Wildlife care centre.
 - Retention of vegetation and preferential use of previously disturbed areas where possible.

On this basis, it is unlikely that the Proposed action will result in a significant impact or result in the species decline.

The impacts of the Proposed action on Black Cockatoos have been broadly assessed against the Commonwealth Significant Impact Guidelines 1.1 (DotE, 2013). This assessment is presented in Tables 1 and 2 of Attch 1-Coates Gully-MNES Assessment Memorandum.

Section 6

Environmental record of the person proposing to take the action

6.1 Does the person taking the action have a satisfactory record of responsible environmental management? Explain in further detail

Main Roads is a State Government agency with an assured record of responsible environmental management and performance.

Main Roads has a strong environmental compliance record for all environmental approvals granted under the EPBC Act and the EP Act.

Main Roads operations are undertaken in accordance with an Environmental Policy, which outlines Main Roads overarching objectives for environmental protection, sustainability and continual improvement in environmental performance.

The Environmental Policy is implemented through Main Roads' international standard AS/NZS ISO 14001:2015-certified Environmental Management System (EMS). The Main Roads EMS provides a formalised systematic approach to environmental management for all aspects of the operations (road planning, construction and maintenance).

6.2 Provide details of any past or present proceedings under a Commonwealth, State or Territory law for the protection of the environment or the conservation and sustainable use of natural resources against either (a) the person proposing to take the action or, (b) if a permit has been applied for in relation to the action — the person making the application

There are no current or past proceedings against Main Roads.

6.3 If it is a corporation	undertaking the action will th	e action be taken in accord	lance with the corporation's en	vironmental policy
and framework?				

✓ Yes
☐ No

6.3.1 If the person taking the action is a corporation, provide details of the corporation's environmental policy and planning framework

Main Roads' EMS is independently certified and covers the processes and activities that have the potential to impact the environment. The EMS ensures compliance with Main Roads environment and heritage compliance obligations, providing the framework for driving environmental requirements through leadership, planning, support, operation, performance evaluation and improvement actions.

The action, therefore, will be undertaken, monitored and measured in accordance with the Main Roads Environmental Policy commits to protecting and enhancing the natural environmental and social values in all Main Roads activities. Main Roads EMS certificate and Environment Policy are publicly accessible from:

- EMS https://www.mainroads.wa.gov.au/globalassets/community-environment/environment/mrwq51-ccee06-certificate-of-confidence-final-iso-14001-2015.pdf
- Environmental Policy https://www.mainroads.wa.gov.au/globalassets/community-environment/environmental-policy.pdf

6.4 Has the person taking the action previously referred an action under the EPBC Act, or been responsible for undertaking an action referred under the EPBC Act?

Yes No

6.4.1 EPBC Act No and/or Name of Proposal

Main Roads has referred numerous projects under the EPBC Act. A list of recent projects referred to DAWE under the EPBC Act is provided below.

- EPBC 2020/8833 Mitchell Freeway Principal Shared Path Gaps Project Ocean Reef Road to Hepburn Avenue Controlled action
 - EPBC 2020/8800 Bussell Highway Hutton To Sabina Controlled action
 - EPBC 2020/8784 Roe Hwy Great Eastern Hwy Bypass (GEHBI) Controlled action
 - EPBC 2020/8746 Great Eastern Highway Safety Improvements (Packages 4B and 5) Not a controlled action
 - EPBC 2019/8543 Bunbury Outer Ring Road (BORR) South Controlled action
 - EPBC 2019/8471 Bunbury Outer Ring Road Northern and Central Section Project Controlled action
 - EPBC 2018/8367 Mitchell Freeway Extension and Wanneroo Road Upgrade Controlled action
 - EPBC 2018/8346 Indian Ocean Drive Widening, Gingin Shire Not controlled action
