

# Sustainability Position Statement

Excellence in managing the sustainability aspects of the Project is integral to the way we work. This Position Statement outlines the principles and approach that the GNC team will adopt in ensuring the social, environmental and economic aspects of the project are delivered in the most sustainable and practicable manner possible.

The GNC Team is committed to the delivery of the NorthLink WA Central Section in a way which seeks to enhance economic and social development whilst minimising negative impacts on the sensitive natural, built and social environments between Reid Highway and Maralla Road.

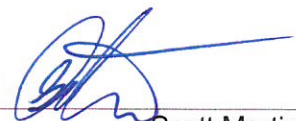

## Our Guiding Principles

- Minimise negative impacts on sensitive environments, including seeking opportunities to enhance the quality of receiving waters and environmental flows
- Minimise negative impacts on visual, environmental and community amenity during construction and into the future
- Seek opportunities to enhance environmental, local economic and community outcomes

## Our Approach

At all times the GNC Team will actively involve all personnel on the project (including employees, and our network of sub-contractors, suppliers and consultants) to achieve the following objectives:

- Promote a culture of shared responsibility for achieving improved sustainability outcomes
- Pursue sustainability initiatives which deliver real benefits for the community and the environment
- Seek opportunities to enhance the natural and social environments and leave behind a positive contribution to community health and wellbeing
- Support the economic development of the Swan Valley and the north eastern corridor
- Continually improve the efficient use of resources, energy and water on the project and reduce waste
- Actively engage with Main Roads, the communities, stakeholders and all those participating in the project on improving sustainability outcomes
- Value cultural heritage and respect traditional land owner groups
- Promote a local, healthy and safe workforce
- Consider sustainability aspects in decision making, risk management and procurement
- Continuously monitor sustainability performance across the life of the project looking for ways to make continuous improvement in the way we work
- Improve knowledge, awareness and skills of those engaged on the project related to sustainability requirements and practices.
- Meet or exceed all the relevant legislative and regulatory requirements as related to environmental, social and local economic aspects
