

QUADGUARD CZ

REVISION REGISTER

Revision	Description	Date
1	Issued for use.	19/12/2013.
1 A	Updated Supplier details	17/08/15
1 B	Quadguard CZ no longer accepted for installations after phase out period	17/04/2020

The QuadGuard CZ system is a redirective, non-gating crash attenuator which is mounted on a steel plate for use in temporary situations. The unit is the same as the Quadguard.

The QuadGuard CZ system is mounted on a steel plate and needs to be adequately anchored, which may be done by attaching it to 28 MPa concrete pad. Alternatively, appropriate anchorage may be provided as per the QuadGuard® System Product Manual.

As the Quadguard CZ system is used for temporary situations, rectification of pavement after removal of the anchorage will be required.

For details of the lengths, design and limitations of the system refer to the Quadguard System end treatment sheet.

With the acceptance of the Quadguard M10 CZ Crash Cushion by Main Roads on 17 April 2020, the QuadGuard CZ system will not be accepted for temporary installations on Main Roads WA contracts awarded after 1 January 2022.
